

# Who is Loren Eiseley?

Loren Eiseley was a Nebraska naturalist and philosopher who grew up in the pre-Depression years of the 1920s in Lincoln, Nebraska. In his youth, he wandered through marshes and sewers, explored sunflower forests, filled fish tanks with muck and mire from a frozen pond to see what might emerge, and played dice in an abandoned house near his home. He became fascinated by the mammoth bones he saw on a visit to the state museum, and soon set up a museum of his own discoveries. As a university student, he hunted fossils in the rich bone beds of western Nebraska and eastern Wyoming. These experiences would inspire the essays and poems that he wrote about the mysteries of nature and humankind's relationship to the natural world.

A celebrated scholar and writer, Eiseley spent most of his professional career as a Benjamin Franklin Professor of History and Science at the University of Pennsylvania. *The Bloomberg Review* declared, "There can be no question that Loren Eiseley maintains a place of eminence among nature writers."
